

Lua Keyword

To get the Lua keyword in the command line type **Lua** into the command line.

Description

This keyword is used to execute commands written in the script language Lua.

After entering Lua into the command line, type in the script language Lua version 5.3. The grandMA2 will directly execute the commands written in Lua.

Syntax

Lua "Lua code"

Example

A screenshot of a command line interface. On the left, there is a yellow sphere icon. To its right, the text "[Channel]> Lua "gma.feedback('hello world')"" is displayed in white on a dark green background.

"hello world" is displayed in the command line feedback in yellow.
