

Freeze Keyword

Important:

If Freeze is on, programmer values have a higher priority as playbacks.
Only executor priority **Super** has a higher priority than Freeze.

To enter the Freeze keyword in the command line, use one of the options:

- Press **Freeze**
- Type **Freeze**
- Type the shortcut **Fr**

Description

Freeze is a function keyword used to change the priority of the programmer.

Freeze is a toggle function. This means that entering Freeze without any helping keyword toggles the Freeze mode on/off.

Syntax

Freeze

Freeze On

Freeze Off

Example

To turn on the freeze mode, type:

```
MA User name[Fixture]> Freeze On
```
