

Add Windows

Windows are added to the **user definable areas** on the screens.

The best way to add a window is by tapping inside an empty screen area. The window is added with the upper left corner where the screen is tapped.

Another option is to tap and draw a square on the empty screen to define the window size.

Tap the screen to open the **Add Window** pop-up:

Tap a button with the desired window to create it

Windows are divided into different tabs. The tabs are **Common**, **Pools**, **Presets**, **More**, and **All**. Tapping the different tabs reveals different buttons with the windows for each section.

Tap the desired button to create the window.

The title bar of the pop-up has two buttons. The red **Delete Screen** button removes all windows from the screen.

The **Configure** button opens the **Configure Display** pop-up. This can be used to customize some settings regarding tools on the side of the display and change the size of the user area. Read more in the **Configurations of Displays topic**.

List of current windows that can be created using the **Add Window** pop-up:

Common:

- Fixture (Sheet)
- Sequence (Sheet)
