Clean Start

A clean start may sometimes be needed, for example to reset the station settings.

If the app was displayed on a monitor that is not connected anymore, you may want to reset this setting.

- To execute a clean start in a windows system, select the app grandMA3 onPC x.x.x.x Clean Start from the MA Lighting folder.
- To execute a clean start in a macOS system, press and hold the `Option` key on the keyboard and then start the grandMA3 onPC application. A pop-up asks if the clean start should be executed. Click `Continue` to do so. Otherwise, click `Cancel` .

The software restarts and all station settings are deleted.
